ACKNOWLEDGEMENT

The successful completion of the project is the result of the inspiration and constant support. We have received from various sources. We avail this opportunity to express our sincere gratitude to all those who have helped us directly or indirectly for completion of the work.

We express our deep sense of gratitude to our guide Smt. Sneha Abraham for selecting the topic, valuable guidance and sincere encouragement throughout the period of study. We express our sincere gratitude to the principal Dr. Alphonsa Vijayan, Head of the department Smt. Jini Justin D'Costa and all other teacher of the department of commerce for their overall guidance.

We express our deep gratitude to all our participated in our survey. We would like to thank our parents, friends and well-wishers who helped us in different ways for the completion of the work.

Last but not the least, we bow our head before God Almighty to bless us with enough physical and mental strength to sustain our ambitions even during time of lapses.

Jinumol Raj

CHAPTER-1
INTRODUCTION

1.1 INTRODUCTION

A brand is a name, word, appearance, or other characteristics that sets one seller's product apart from those of competitors. Business, marketers and advertisers use brands. A current illustration of a brand is Nike, Adidas etc. The corporation that is closely associated with a brand is frequently referred to by the metonym brand. A brand connected to a commodity is called commodity brand. Old Norse brandr, which means to burn, is where the term brand originates. Recalling the custom of manufacturers marketing marking their items with a burning mark.

The American marketing association (AMA) defines a brand as a "name, term, sign, symbol, or design or combination of them intended to identify the goods and services of one seller or group of sellers and to differentiate them from those of other sellers. Therefore, it makes sense to understand that branding is not about getting your target market to choose you over the competition, but it is about getting your prospects to see you as the only one that provides a solution to their problem. A strong brand is invaluable as the battle for consumers intensifies day by day. It's important to spend time investing in researching, defining, and building your brand. After all brands is the source of a promise to your consumer. Opinions, good instinct and creative thinking are not enough when it comes to brand analysis. Brand analysis involves sizing up a business situation and deciding on a strategy. Two 12 major concerns of brand analysis are the industry and the existing competitive conditions. These assessments are necessary essential of brand analysis.

They ensure availability of long-term direction, establishing appropriate objectives, and essentially creating an effective strategy. Brand analysis includes knowing what a specific industry's dominant economic features are. Also, brand analysis examines what existing industry competition is like and how strong each of the industry's competitive forces is. Effective brand analysis is achieved through an analytical sequence of strategic appraisals of a business' external and internal environment, to establish issues, evaluate alternatives, and create strategy. If these crucial assessments are not executed, a business may find that the brand it developed does not fit well with the environment of its intended industry and will not be capable of establishing and maintaining a competitive advantage for the business. Brand analysis is requiring a strategic evaluation of a business ecosystem. Any decisions should be based on sound analysis of a business, external and internal structure.

In order to successfully establish a business' brand, an evaluation of dominant economic features in an industry must be carried out. Industry, in this context, refers to several businesses with the same or similar product or service competing for the same consumers. When evaluating an industry's economic features, some common factors should be focused on. Some of the economic factors include the market size, the scope of competitive rivalry, the growth rate of the industry, the current growth cycle in industry, the number of competitors and their relative size, the number of consumers and their relative size, and the kinds of distribution channels used to access existing and potential consumers. Having evaluated and established the industry's dominant economic features, it is time to assess the competition and existing competitive forces. Any important part of the brand analysis is examining how exactly works in an existing industry and what are the competitive strength. Although every industry's environment will vary slightly from the other, the competitive processes at work within each industry are generally the same. These competitive processes are usually made of five competitive forces. These five competitive forces include the rivalry among competing business in an industry, the market attempts of business to win over the potential buyer. The bottom line to brand analysis is the need to evaluate branding strategy can be delivered.

Brand analysis is done to ensure that the developed branding strategy effectively protect its long-term competitiveness and profitability, and establishes if the pricing of products and services are right. A fundamental industry and competition assessment is essential to ensure a good branding strategy. Successful businesses use their brand analysis to establish and implement shrewd strategies that match the industry's environment. Brand loyalty is a scenario where the consumer fears purchasing and consuming product from another brand which he does not trust. It is measured through methods like word-of-mouth publicity, repetitive buying, price sensitivity, commitment, brand trust, consumer satisfaction, etc. Brand loyalty analysis is the analysis of how much consumer remains loyal to a specific brand as long as it available. Brand loyalty exists when the consumer feels that the brand consists of right product characteristics and quality at right price. Even if the other brand is available at cheaper price or superior quality, the brand loyal consumer will stick to his brand. It acts as a means of launching and introducing more products that are targeted at same consumers at less expenditure. It also restrains new competitors in the market.

Nike produces a wide range of sports equipment and apparel. Their first products were track running shoes. Nike Air Max is a line of shoes first released by Nike, Inc. in 1987. Additional product lines were introduced later, such as Air Huarache, which debuted in 1992. The most

recent additions to their line are the Nike 6.0, Nike NYX, and Nike SB shoes, designed for skateboarding. Nike has recently introduced cricket shoes called Air Zoom Yorker, designed to be 30% lighter than their competitors'. In 2008, Nike introduced the Air Jordan XX3, a high-performance basketball shoe designed with the environment in mind.

Nike's range of products include shoes, jerseys, shorts, cleats, base layers, etc. for sports activities such as association football, basketball, track and field, combat sports, tennis, American football, athletics, golf, ice hockey, and cross training for men, women, and children. Nike also sells shoes for activities such as skateboarding, baseball, cycling, volleyball, wrestling, cheerleading, lacrosse, cricket, aquatic activities, auto racing, and other athletic and recreational uses. Nike recently teamed up with Apple Inc. to produce the Nike+ product that monitors a runner's performance via a radio device in the shoe that links to the iPod nano. While the product generates useful statistics, it has been criticized by researchers who were able to identify users' RFID devices from 60 feet (18 m) away using small, concealable intelligence motes in a wireless sensor network

1.2 STATEMENT OF THE PROBLEM

Nike brand is a name, word, appearance, or other characteristics that sets one seller's product apart from those of competitors. Business, marketers and advertisers use brands This study aims to make an analysis of youth approach towards NIKE brand. The study attempts to understand the affect or importance of brand loyalty for a brand and attitude of consumers regarding the brand Nike. The study was conducted to understand and evaluate the strengths and opportunities for these companies in the market and also to examine the significant developments and milestone that have taken place in the company.

1.3 SIGNIFICANCE OF THE STUDY

The study helps us to know the satisfaction towards Nike brand special reference to Cochin City. Some of the main benefits of Nike's loyalty program are access to exclusive products, advice from experts on training and exercise, priority tickets to sporting events, rewards for activity on the apps, early access to product launches, special offers on birthdays, and free delivery. It's one of the main significances is to add greater customer loyalty. It also Increases brand popularity. The key is Nike's ability to cultivate customer trust. Between its brand legacy, its knowledgeable team and its commitment to the entire athletic experience, Nike proves it knows athletes. Needless to say, they're equally good on providing support. Nike has one of the strongest customer service accounts on Twitter. They feature a dedicated Twitter

account, Team Nike etc. This study also Lends support during corporate crisis. It also helps to stand out from competition.

1.4 OBJECTIVES

- To analyze the level of awareness of customers towards Nike brand
- To identify the factor influencing in purchase decision of customers
- To analyze the satisfaction level of the customers
- To analyze the effectiveness of the marketing strategies adopted by Nike

1.5 RESEARCH METHODOLOGY

1.5.1: Research Design

The present is descriptive, quantitative, and analytical in nature. It is descriptive in the sense it tries to identify various characteristics of research problem. It is quantitative because it involves numerical expression. And it is analytical since it examines, analysis, and interprets collected data order to arrive at conclusion.

RESEARCH INSTRUMENT: Questionnaire is a research instrument consisting of a series of questionnaire and other prompts for the purpose of gathering information from respondents.

- **PRIMARY DATA:** The data which is collected from primary sources that is source of origin from where the data is generated, they are collected for the first time by an investigation or an agency for any statistical analysis. for collecting primary data, we use the method of questionnaire. The questionnaire is a major technique for collecting primary data. The structured questionnaire was distributed to samples for gathering primary data.
- **SECONDARY DATA:** Secondary data on the other hand is one which has already been collected by someone else has been passed through the statistical process. Information from secondary sources Like journals, newspaper, books, magazines, reports, websites etc. has contributed to this study.

1.5.3 Sample design: sampling is a process used in the statistical analysis in which a predetermined no: of Observation are taken from a larger group. Random sampling technique was used to select the samples from population.

Sample data: out of the whole consumers in Cherthala taluk, a sample size of 100 was selected for the slavery.

1.5.4: Tools for analysis: The collected data were used with the help of statistical tool like percentages. In questionnaire five-point scales were used in several ties, four point and three-point scales were also used. Tabular and graphical presentations were used for presentation of data. Graphical presentation includes bar diagram, histogram, pie chart etc.

1.6 SCOPE OF THE STUDY

The study was confined only to the consumers of Nike brand. For the analysis primary data are collected through questionnaire and secondary data are obtained from published journal, magazines, websites. The scope of the study is to analyze the approach of youth towards Nike brand and understanding about the factors affecting the brand loyalty.

1.7 LIMITATION OF THE STUDY

- The timespan of the study was limited.
- The responses from the respondents may be biased and prejudiced
- Response of the respondents may have the bias, which may not give true picture about the chosen research topic.
- Sample may not be representatives of the interest of the entire population

CHAPTER-2

REVIEW OF LITERATURE

2.1 REVIEW OF LITERATURE

Rajdeep Singh (2016) study based on brand loyalty in footwear industry The dynamic competitive environment has changed the way the businesses were run in the past. The increased awareness of the customers along with increase in the number of options available to them as completely revolutionized the marketing task. In the current scenario a great need is felt for long term relationships with the customers to enjoy repeat sales. The business organizations these days are laying focus on enhancing the brand loyalty among the consumers to reap the benefits of repeat sales. The present study, therefore, is an endeavor to investigate the factors that affect brand loyalty in the footwear industry. Simultaneously an attempt has been made to identify the most sought-after brand in the footwear industry. A sample of 100 respondents was selected from the Ludhiana region. Statistical techniques of correlation and multivariable regression were used. The result depicted that out of the total fourteen identified factor had significant relationship with brand loyalty. Proper pricing techniques and customer satisfaction were the dominant variables in affecting brand loyalty a footwear brand.

Amit Jain (2012) market comparison on Nike and Adidas Amit Jain may has been observe that satisfied customers are most likely to share their experiences with other people to the order of perhaps five six people. Equally 23 well, dissatisfied customers are more likely to tell another ten people of their unfortunate experience. Furthermore, they conclude that it is important to realize that many customers will not complain and this will differ from one industry sector to another. Lastly, if people believe dealing with customer satisfaction complaint is costly, they need to realize that it costs a much as 25 percent more to recruit new customer.

Wembo Cui (2011) consumer-based brand equity in Chinese sports market. A study of examine of practicality and application of a customer-based equity model in the Chinese sportswear market. This study collected data from consumers from Chinas 2 largest cities Beijing and shanghai. Based on Aakers concept of frame of brand equity it studied causal relationship among the four dimensions of brand equity and overall brand equity in sportswear industry weak support was fond of the perceived quality and brand aware that the brand managers and marketing planners should considered the relative importance of brand equity in their overall brand equity evaluation and should concentrate their effort primarily on building

brand loyalty and image. This study basically provides important insight about understanding of Chinese consumer perception of overall brand equity and its dimension.

Preeti Mehra (2010) consumer satisfaction over purchase of branded shoes the study offers and validates a comprehensive approach to explain factors influencing the attitude of respondents towards various characteristics of branded sports shoes. In order to attain this objective a sample of 322 respondents belonging to three cities of Punjab; Jalandhar, Amritsar and Ludhiana, was drawn, nonprobability convenient sampling adopted for selecting the respondents. It was however, found that brand loyal preferred buying shoes of their fancied companies whereas innovator's preferred shoes with the latest state of the art trends and technologies. Consumers desired sport shoes to be colorful and stylish and happened to relate traits of shoes to their personality.

Prof. Gill (2009) report based on branding strategy of Nike & Adidas Prof. Smith may have been observed that in relation to consumer and perception of sportswear, it is important to understand the culture impact and personality of fashion globally. Because fashion is representation of personality, style, preference when combined with sportswear .it represent an active lifestyle and present the assumption that one is concern with his or her physical well-being and striving for a better quality of life. Consumer motivations for purchasing sportswear, especially for its versatile use of being available to be worn casually and for athletic participation.

Prof. Gill (2009) report based on branding strategy of Nike & Adidas Prof. Gill has been stipulated in their project report that the branding strategies of NIKE and ADIDAS focusing on products splitting by sport and training. While the later focusing on football, running, training and the outdoors. The new perception 21 of sportswear as leisure or everyday clothing is something for athletics supreme to capitalize on much like lulu lemon and fable tics by actress kale Hudson. This new field could lead to success. A 2009 study by cotton incorporated showed that 80 percent of people interviewed use sport clothes for everyday life and not just during sport performance or undertaking physical activity. The literature show that consumer

have shifted towards the duality of athletic wear being for both physical activity and even relaxing.

Bethuel kinyanjuikinuthia (2009), customer satisfaction of purchased branded shoes in Malaysia This study basically investigates on the relationship of brand equity and customer satisfaction purchasing branded shoes in Malaysia. Customers are being increasingly important in the lives of most of the business organizations as competition increases hence many companies begin to recognize the importance of retaining current customers and some have initiated various activities to create customer loyalty. Customer was examined by a quantitative method of surveying by questionnaire from 205 respondents. From this survey the relation between brand equity, customer satisfaction and customer loyalty were established. It concluded that customer satisfaction is the antecedent of customer loyalty, although influence of brand equity was less significant the result still shows a positive score for brand equity.

Prof. Richard (2007) report based on customer loyalty. Richard has been observed that developing customer loyalty is almost important for every company as new fresh customer acquisition alone will not ensure long term success. Reichheld was one of the first to propose that companies should put more effort in customer retention as oppose to acquisition Along with W.E. SASSER. He affirmed that customer retention is major driver of company profits. This appears to be reasonable given that the well-versed marketing axioms. Indicated by Pfeifer. It costs five times more to acquire a new customer than to retain an existing one.

Celuch (2004) customer satisfaction based on brand loyalty According to the findings by Taylor, Celuch, & Goodwin (2004), brand equity appears as one of the most influential influences on both behavioral and attitudinal 24 loyalty. Besides building on long term customer loyalty, besides building on long term customer loyalty, organizations putting effort in achieving high brand can produce difference advantages. Although previous researcher and recurrently researched on customer loyalty, yet the fundamental of its formation are still remained uncertain, even if numerous antecedents have been named. Among these antecedents, both scholars and practitioners have attributed peculiar credit to customer satisfaction, announcing it as another main antecedent of loyalty (Bodet, 2008). Referring to Oliva et al.'s

study, minor change in satisfaction can lead to a substantial change in loyalty increment {as cites in Bowen & Chen, 2001}. Hence, further implicate that customer satisfaction is one of the ante cents of customer loyalty.

Anderson (2004) examined that there is a positive integration between satisfaction of the customer at store level. Customer satisfaction is the best way which will enhance the financial performances, profitability of the company and number of customers who will directly or indirectly increases the revenue of the company. Customer satisfaction also says that if any company has large number of satisfied customers based then the company is the market leader because their quality services, standard services at low price.

D mello (2003) report based on brand experiences in addition to the analysis six further studies were conducted to prove the reliability of the scale brand experience of customer intensity over the preference of their choice among four or five items and then select one product and compare that product to the other brand. Comparison is basically about the experience of customers for using the product and satisfaction over the product.

Troy (2000) customer satisfaction based on product quality The study by Troy stipulates the need for appropriate Footwear as they are more than just shoes. According to the author shoes give identity and image and also the symbol of Shoes Company increases the status of Shoes Company. The managers should realize that their customers demand will continue to increase. So, the symbols and brand logo of Nike and Adidas attract consumers and increase their product sale by media, internet, advertisement and all. Customers satisfaction needs are not meet by only brand name but also buy quality of product. Also, there are different type of shoes choices like in sports shoes (gym shoes, jogging shoes or any other game shoes) etc.

Choice and James (1996) report based on customers preference The consumer behavior aims at analyzing how consumers act on a market or on a special industry. According to the consumer behavior specificities of the consumer behavior in the sportswear industry. This review provides insight of consumers, their motives, their choice, their decisions and their

differences. The outcomes of the analysis identify two different behaviors towards sportswear products: 19 consumptions for the practice and the consumption for everyday life. These two types of consumptions present similarities but also points of divergence. This basically can represent a tool for sportswear firms as a clear analysis of their target or those who can create a target as well.

Sulek (1995) examined that the customer satisfaction positively profitably affects the services. It means the demand of the service will be increase day by day. It also said that customers are brand loyal and if they satisfy then they avail the services whether the service charges are high. Customer satisfaction is very profitable for any organization to increase their sales, income, revenue and customer base. So Sulek call it as positively affects the sales of services.

Jacobucci (1994) examined and explained the precise and easy definition of services standards and customer pleasure and happiness. He said that all the service standards will never be misled by the satisfaction of customer, while the pleasure is profitable result of giving better advantage. Here, there's a huge difference between service standards and customer happiness. But many customers think that it is same. Actually, service quality is a factor which will influence a customer for their satisfaction like that there are many factors which employee performance are, behave of the employee, price, etc. These all the factor will lead to the customer satisfaction. So that customer will be happy and be brand loyal.

Bale el al (1981) fall of US footwear sector The study by bale el al explores the reasons behind the fall of the US footwear sector and its emergence as major importer of non-rubber footwear. The industry has decline in terms of output, number of firms and employment and therefore the imports has increased considerably. Over the period of years, the wage rate has increased tremendously that has led to decrease in productivity as against the foreign countries especially the developing ones which enjoy pool of low-cost labor.

Jacoby & Kyner (1973) report based on brand loyalty in general, loyalty is shown by different propensities toward the brand, store or service. Typically, customer loyalty means the property

of customer to repeatedly purchase specific subject (brand, product, service, shop, etc.) with affection regardless of the change in the circumstances. However previous researches have yet not formulated a universal definition of customer loyalty upon which everyone agrees. Over the years, there were debates focused around what customer loyalty actually is, as Majumdar states, customer loyalty is complex, multidimensional concept. One widely accepted explanation of loyalty is by Jacoby and Kyner (1973), describing it as the biased, behavioral response, carried out over time, by some decision-making unit, towards one or more alternative brands in a same category and is a part of psychological process. Pick apart similar definition 'customer loyalty is viewed as the strength of the relationship between individuals' relative attitude and their repeat patronage, by based only on three phase, situation influences, explicating the situation of action qualified by adding the fourth phase, situational influences explicating situation of qualified by commitment, predisposition in favor of something and consistency while recognizing the nature of the marketing environment.

Cyert (1955) customer buying behaviors towards branded casual shoes. Cyert (1956) may have been first to observe that a number of managers involved in buying process. And the concept was labelled Buying behaviors and popularized by Robin's son. Webster and Wind famously identified five buying roles, they are 1. Users, 2. Influencer, 3. Buyer, 4. Decider and 5. Gatekeeper. The product purchase decision is not always done by the user. The buyer necessarily purchases the product marketers must decide at whom to behaviors, they are able to predict how customer are likely to react various informational and environment cues and are able to shape their marketing strategies accordingly (Kotler 1994)

CHAPTER-3
THEORETICAL FRAMEWORK

3.1 INTRODUCTION

A brand is a name, word, appearance, or other characteristics that sets one seller's product apart from those of competitors. Business, marketers and advertisers use brands. A current illustration of a brand is Nike, Adidas etc. The corporation that is closely associated with a brand is frequently referred to by the metonym brand. A brand connected to a commodity is called commodity brand. Old Norse brandr, which means to burn, is where the term brand originates. Recalling the custom of manufacturers marketing marking their items with a burning mark.

The American marketing association (AMA) defines a brand as a "name, term, sign, symbol, or design or combination of them intended to identify the goods and services of one seller or group of sellers and to differentiate them from those of other sellers. Therefore, it makes sense to understand that branding is not about getting your target market to choose you over the competition, but it is about getting your prospects to see you as the only one that provides a solution to their problem. A strong brand is invaluable as the battle for consumers intensifies day by day. It's important to spend time investing in researching, defining, and building your brand. After all brands is the source of a promise to your consumer. Opinions, good instinct and creative thinking are not enough when it comes to brand analysis. Brand analysis involves sizing up a business situation and deciding on a strategy. Two 12 major concerns of brand analysis are the industry and the existing competitive conditions. These assessments are necessary essential of brand analysis.

They ensure availability of long-term direction, establishing appropriate objectives, and essentially creating an effective strategy. Brand analysis includes knowing what a specific industry's dominant economic features are. Also, brand analysis examines what existing industry competition is like and how strong each of the industry's competitive forces is. Effective brand analysis is achieved through an analytical sequence of strategic appraisals of a business' external and internal environment, to establish issues, evaluate alternatives, and create strategy. If these crucial assessments are not executed, a business may find that the brand it developed does not fit well with the environment of its intended industry and will not be capable of establishing and maintaining a competitive advantage for the business. Brand analysis is requiring a strategic evaluation of a business ecosystem. Any decisions should be based on sound analysis of a business, external and internal structure.

Nike Inc. designs, markets and sells athletic shoes, sneakers, clothing, equipment, services and accessories worldwide. Independent contractors manufacture the majority of Nike's merchandise. The business sells its goods directly to consumer through independent distributors, retailers and independent distributors, retailers and retail stores in addition to its physical stores and online store.

The top shareholders of Nike are Phil Knight, Mark Parker, Andrew Campion, Swoosh LLC, Vanguard Group Inc., and BlackRock Inc. Nike is a leading manufacturer of sports-related products, including shoes, apparel and equipment. Many people from all over the world are familiar with the brand, as it has a global presence that earns more than \$18 billion in revenue. The Nike logo has become a popular global icon. Nike also partners with sports stars to further promote the brand.

3.2 HISTORY OF NIKE BRAND

Nike, headquartered in Beaverton, Oregon, is the largest and most successful brand of shoes, sports equipment, clothing and controlling more than 60% of the market and becoming a pop culture icon. One might say that the Greek Goddess of Victory for which Nike was named is actually the Goddess of shoes. Nike may be one of the youngest of major brands, but it is the dominant brand around the world. In 1963- 1964 when university of Portland track coach, Bill Bower man, and Phil knight, a mid-distance runner joined forces to import and provide low cost, high tech running shoes from Japan in order to provide alternative to the German – dominated athletic shoe market. Operating under the name Blue Ribbon sports, Bower man and knight began to sell the Japanese Netsuke running shoes. Jeff Johnson, a former rival of knight, joins the company in 1965 as their first full time sales person and sells shoes from the back of his van at local and regional track meets until opening Blue Ribbon 30 sports first retail outlet at 3107 Pico Blvd, Santa Monica California. This store is no longer in existence, but the address remains.

The invention led Bower man and knight to begin designing other shoes, and the company's new name, Nike, Inc. was born when Jeff Johnson, dreams of the Greek Goddess of victory, Nike. A succession of shoes, many based on the waffle outsole follows. Some of the most famous are the Waffle Racer, Air Force One, Air Max 93, Max95, and Max97.

1971 Nike's swoosh design logo was created by Portland state university — graphic design student Carolyn Davidson when asked by Knight. He needed a logo to put on the side of his

company's shoes. At the time she was paid \$35 (US), and also worked for Nike for a few years until they needed a full ad agency.

Twelve years later, in 1983, Ms. Davidson received gold swoosh ring with an embedded diamond at luncheon honoring her, along with a certificate and a undisclosed amount of Nike stock, in recognition of the Swoosh design logo.

1979 Nike's Air technology patented by inventor M. Frank Rudy is introduced in the tailwind running shoe. Gas-filled plastic membranes are inserted into the sole of running shoes to provide cushioning. 1980 Nike completes an initial public offering of 2,377,000 shares of class Common stock on December.

1982 The Air Force | basketball shoe becomes the first Nike court shoe to make use of air technology. 1984 Nike signs Michele Jordan to an endorsement contract and releases the first model of his signature shoe, the air Jordan. Originally, the NBA banned this new shoe, drawing a tremendous amount of publicity. The introduction of the air Jordan shoe was a key event in Nike's successful development.

1986 Nike revenue surpass \$1 billion for the first time.

1987 The Nike Air max shoe is introduced, which uses a much larger.

cushioning unit, and for the first time is visible at the side of the midsole. This was the first of many generations of Air Max-branded technologies. A television and featuring the Beatles' song "Revolution" was the first and only time that a song performed by the Beatles was used in a TV ad. 1988 Nike introduces its "Just Do it" slogan

2006 Nike released the fourth pair of sneakers sponsored by Lebrun James. Nike Air Zoom Lebrun. Not only was the shoe the single sponsor of an airing of ESPN sports Center, there were also 400,000 DVDs distributed that showed the making of the shoe and its unique ad campaign. There were many advertising outlets used for the fourth shoe in the series that were not used as heavily in the first, second or third versions on which a large Nike shoe on a billboard — transforms into a transformer. Recently, after radio host Don Emus made his infamous comments on + Nike created a spin-off ad campaign defending women athletes.

3.3 SWOT ANALYSIS

STRENGTHS

Strong Brand Awareness and Brand Value: Nike is one of the most recognizable brands in the world as its name alone is memorable, easy to pronounce, and very unique. Its swoosh symbol is easily recognized by everyone.

Aimed For Sustainability: Nike’s CEO Mark Parker has addressed that they will continue to acknowledge the environmental issues in the communities. The CEO ensures that Nike will help to contribute in finding a solution against these environmental issues.

Low Manufacturing Cost: Most of Nike’s footwear is manufactured in foreign countries. In the fiscal year 2021, Vietnam produced 51%, China produced 24%, and Indonesia produced 21% of total Nike’s footwear. Other operations are in Argentina, Brazil, India, Italy, and Mexico.

Iconic Relationships: Nike’s long-term partnership with Michael Jordan has proved to be beneficial in terms of sales for the company. Their collaboration resulted in “Air Jordan 1 Shoes”. Additionally, Nike teamed up with the famous basketball player to help design the “Air Jordan 1 Shoes”.

High Market Share: Nike is a market leader in footwear industry. Nike has captured approximately 39% of the global athletic footwear market and 13% of global athletic apparel market.

3.4 NIKE PRODUCT INFORMATION

Footwear

Shoes are Nike's flagship product. The company manufactures different shoes for a wide variety of sports, such as basketball, football, golf, soccer, baseball, snowboarding, hockey, tennis and volleyball. It also makes consumer fashion-shoes such as Mary Janes and flip-flops. Nike shoes are designed for efficient sports performance as well as for aesthetics.

Apparel

Nike also produces apparel for sports activities, as well as other activities including dance and yoga. It features different collections for its apparel, including Livestrong, Nike Pro, Nike Free and SPARQ. In addition, Nike makes casual clothes for men and women. Many consumers wear Nike clothes not just for sports activities but also for brand status.

Equipment

Aside from shoes, Nike also sells sports equipment, such as baseball bats, balls, swimming caps, rackets and golf clubs. Nike also sells gloves and yoga mats, as well as agility cones. Other sports equipment it sells includes weights and sports guards such as knee pads, wrap sleeves and shin guards.

Accessories

The company is also well-known for accessories such as watches, bags and socks, as well as consumer technology such as the Nike+ supplement for the iPod. Nike also sells rubber bracelets, training DVDs and athletic belts. Many of the bags it sells feature a particular team such as Manchester United or a university such as UCLA.

Stores

Nike products are sold in a variety of stores worldwide. Nike products can be bought online through the company's website, Nike.com. Many department stores also carry Nike products. Nike town is Nike's leading store with branches in cities such as Chicago; Portland, Oregon; New York; and Los Angeles. There are also Nike factory outlets that sell Nike products at a discounted price.

Shoes

Shoe technology is vital to athletic training. The correct shoe can make a difference in how far a long jumper can jump and how fast a runner runs. Shoe makers have used sports technology to design shoes specific to each sport. The design of the shoe's sole, the materials used on the side and the location of the laces all help to increase athletic performance. For example, Asics designs running shoes for each type of runner. Its shoe design is based on frequency of training, the natural movement of your foot and performance level.

Clothing

Athletic training takes place all year long, inside and out. Clothing must therefore keep athletes warm in the cold and cool in the heat without altering movement. Technology in athletic clothing has made performing in all-weather possible. Some companies take it one step further with innovative designs to keep you comfortable and dry. Athletic clothing company Under Armour began by developing a t-shirt that wicks sweat from the body rather than absorbs it. It implements the same technology into every piece of training apparel an athlete wear. It has also developed Locker Tags which comfortably replaced traditional clothing tabs that display jersey numbers with imprints within the garment.

Tracking

Technology in tracking athletic performances includes pedometers, sports watches, scales, body fat calculators and heart rate monitors. Tracking helps athletes monitor their success in achieving specific goals such as weight loss or weight gain. Heart rate monitors allow athletes to track their fitness levels based on their heart rates. It also allows individuals to accurately calculate the number of calories burned. Sports watches with advance technology have the capabilities to tell time, record laps and even control portable music devices.

4.5 MARKETING MIX OF NIKE BRAND

Product Strategy of Nike

Nike offers a vast selection of products, including apparel, shoes, and equipment. Its products are generally focused on premium quality and a wide range of goods for every sports enthusiast from its marketing mix. It leads the sportswear industry and gets its maximum revenue from selling sports shoes.

You might notice that Nike has unique shoe designs for several sports, including basketball, football, and cricket, among others. Surely as the company expands, its product portfolio also gets its corresponding expansion. However, looking closely, one will discover that shoes are generally the most popular products of Nike.

Besides sports shoes, Nike also has casual footwear in vibrant colours that usually attract the younger generation and other sneaker designs for kids, men, and women. Some of the most recognizable shoes from Nike are as follows:

- The Nike Cortez. It is a retro-looking shoe that was initially designed and made for running.
- The Nike Air Max. This shoe is considered the jewel of Nike's sneaker crown and is the first shoe from Nike that features a visible air unit.

- The Air Huarache. It is a high-tech and lightweight running shoe popular for customers under 18 years old.
- The Nike Blazer. This Nike shoe presents a casual look and can also be used in skateboarding.
- The Nike Air Force 1. It is considered the most iconic basketball shoe and is famous as a sports shoe or a casual street sneaker.
- The Nike Air Jordan. Another iconic sneaker from Nike assures comfort for whoever uses it.

Price Strategy of Nike

Nike utilizes premium and value-based pricing strategies for all its products. Value-based pricing refers to the company's consideration of the current price in the market while setting the prices for its products. Before they implement the pricing on products, they assess the overall response of the customers, if they are willing to pay for the items. This type of pricing strategy allows Nike to boost its profit over time. On the other hand, premium-based pricing refers to providing prices on higher-quality products than the value of Nike's competing products. As the company gradually increases the cost of its premium products, higher revenue and sales will be enjoyed.

Part of the Nike marketing mix is advertisements involving prominent celebrities, which can also be associated with its premium branding.

In some cases, Nike also has discounts and promos, such as the “Easter sales” on its physical stores and website. This strategy will help retain existing customers and attract new ones. The investments of Nike in technology can be evident in how it offers premium pricing on its products. However, the company still considers the current market situations in implementing its products' price points and ranges.

Place Strategy of Nike

Nike owns over a thousand stores and offices in forty-five various countries outside the United States. Most Nike products are available and sold in retail stores since most customers prefer to choose products by trying them on physically. Nike strategically positions its retail stores in areas where they are accessible for customers to find its products.

The company has an outlet store called Nike town composed of huge stores occupying four floors offering premium experiences with varied services. Inside this huge building are fancy stores where new products are available. It provides an excellent customer shopping experience with a customization booth and professional zone where representatives can advise on certain products. This store sends a message to its customers that they are valued.

As the dynamics of the industry change, Nike also has to keep up. While physical stores can be beneficial for most customers who prefer to try the product before buying them, some also want to avoid long lines in stores. Hence, the Online Nike Store's emergence and other online stores like Myntra, Amazon, and Flipkart. With people opting to shop from the comforts of their homes, online stores will always be their place to go.

Promotion Strategy of Nike

Nike's primary sources of promotion are sponsorships and advertisements. It does ads that involve prominent celebrities and high-profile athletes from different countries. Nike partners with sports personalities such as Serena Williams, Mo Farah, Cristiano Ronaldo, LeBron James, Rafael Nadal, and Kunal Rajput, to name a few. It also holds sponsorships on sports like cricket, the NFL, and the NBA.

The company's promotion strategy expands from conventional ads and other promos. It does direct marketing through personal communication with schools, colleges, organizations, and local sports teams. To strengthen its public relations, they provide financial support to non-government organizations (NGOs). They can also promote their brand through these initiatives.

Its sales promotions strategies include giving great offers and discounts to customers. As broad as Nike's target market is, one can classify its target audience as the younger generation, fitness and sports enthusiast, and the elite class.

Since younger people consume social media more, the company promotes its products through customer interaction and engagement using its social media channels like Facebook, Twitter, Instagram, and YouTube. And who would not recognize Nike's iconic "Just Do It" slogan? This campaign was first launched in 1988 to motivate everyone to do their tasks efficiently. Another trademark of Nike is the hashtag #YouCantStopUs sending a message to the public

that each sports field is unique and equal. These are Nike's inspiring campaigns with different themes gaining emotional attachment from its customers.

CHAPTER 4
DATA ANALYSIS

4.1 GENDER OF THE RESPONDENTS

5.2 SUGGESTIONS

- More features like new colors, variety, fashion, trend can introduce in the market to increase the satisfaction level of customer.
- While preferring Nike brand must consider quality instead of their Popularity.
- Branding company should make effective use of available opportunities Which helps to build brand loyalty.
- Consumers feel the company is lacking in innovation hence, there preference Has shifted to other local brands.
- Quality products are mostly preferred but quality alone doesn't work, brand Should focus on innovative ideas regarding its product.
- Proper techniques are to be adopted to ensure the quality of products as youth Consumers are very much attracted by the quality of Nike.

- As large proportion of youth prefer branded products much care must be Taken to satisfy their needs so that they stick on a specific brand.
- In present scenario competition is high and consumers may prefer some other Product if the brand fails to satisfy their needs.
- The mostly influenced marketing technique adopted by Nike were discount, media, visuality, belief, offers, nothing influences.as per the study, mostly influenced technique is belief towards brand product have high percentage as per response.
- The study shows there is a positive impact of advertisement and celebrity endorsement on the purchasing decision. Advertisement placed a very significant role in Nike products.
- From the study which shows majority of the respondents chosen Nike brand over the other competitive brand due to brand name, quality and durability. Majority of the respondents are influenced on these factors of Nike brand.

5.3 CONCLUSION

A brand is a name, word, appearance, or other characteristics that sets one seller's product apart from those of competitors. Business, marketers and advertisers use brands. A current illustration of a brand is Nike, Adidas etc. The corporation that is closely associated with a brand is frequently referred to by the metonym brand. A brand connected to a commodity is called commodity brand. Old Norse brandr, which means to burn, is where the term brand originates. Recalling the custom of manufacturers marketing marking their items with a burning mark. They ensure availability of long-term direction, establishing appropriate objectives, and essentially creating an effective strategy. Brand analysis includes knowing what a specific industry's dominant economic features are. Also, brand analysis examines what existing industry competition is like and how strong each of the industry's competitive forces is. Effective brand analysis is achieved through an analytical sequence of strategic appraisals of a business' external and internal environment, to establish issues, evaluate alternatives, and create strategy. If these crucial assessments are not executed, a business may find that the brand it developed does not fit well with the environment of its intended industry and will not be capable of establishing and maintaining a competitive advantage for the business. Brand analysis is requiring a strategic evaluation of a business ecosystem. Any decisions should be based on sound analysis of a business, external and internal structure.

The research is conducted on the topic “A study on consumer satisfaction of Youth on Nike brand with special reference to Cochin district”. The main objective of the research is to measure satisfaction of brand Nike among its consumers. Majority of respondents are brand conscious in buying product. Most among the respondents consider quality of a product before buying a product. Satisfaction on analyzing the satisfaction level of customers, it is revealed that the major part of respondents is satisfied with quality of Nike brands. Respondents says that there is an impact of advertisements and celebrities in the purchasing behavior of Nike product. According to the responses the social media advertising is the best method of advertising suitable for Nike products. More than half respondents of the research are willing to recommend Nike products to others. As large proportion of youth prefer branded products, must be taken to satisfy their needs so that they stick on a specific brand. In present scenario competition is high and consumers may prefer some other product if the brand fails to satisfy their needs.
